

PHYTEC

together. successful.

Embedded Components – added value through advanced performance

How can PHYTEC help your success? To answer this question, we bundle your core competences with ours. You benefit from almost 40 years of PHYTEC experience with embedded systems and our numerous inputs – from direct access to our wide range of state-of-the-art System on Modules and, based on these Modules, our Single Board Computers to implementing an operating system and our extensive software services.

Customized products are also part of our range of solutions. On request, this includes housing design and complete assembly. Longterm cooperation with customers and business partners is our goal. That is why we rely on mutual trust and open communication. In a project with PHYTEC, you keep full control and benefit from mature and cost-efficient solutions.

The optimal basis for our successful cooperation is arranged by starting with an individual workshop so that you can get to know us personally. We regularly perform information exchanges at the developer level throughout the project.

PHYTEC is your partner throughout the entire life cycle of your products – simply integrate our know-how into your development team.

Development, Production and Service – from a single source

The development and production of your electronics directly at our company location in Mainz is part of the PHYTEC philosophy and ensures you the highest degree of reliability, flexibility, and security – essential in view of increasing security requirements. This also applies to fast and agile hardware developments, as well as the proximity of technical engineering and optimal production conditions.

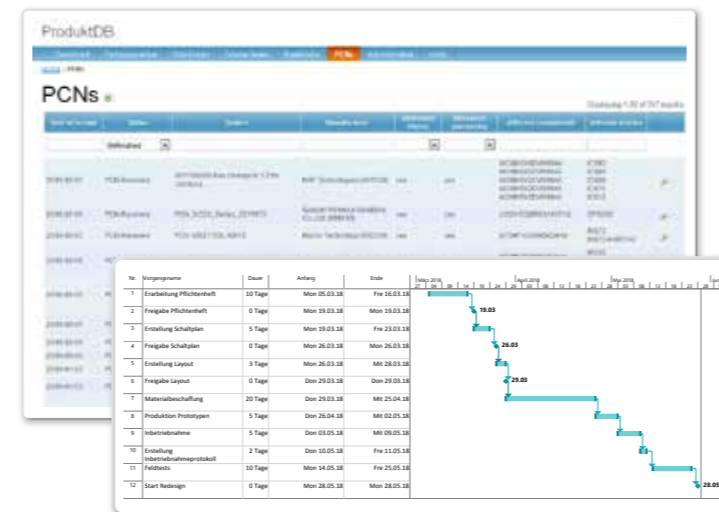

Our competent and motivated employees translate current market trends into innovative solutions at an early stage, be it for securing long-term supply capability or lifecycle management for hardware and software. Our in-house software team develops comprehensive board support packages and makes them available to the public free of charge in accordance with the open-source concept. This is complemented by other offerings on topics such as security and cyber resilience, cloud and IoT integration, update and device management. With agile teams, we will support you according to your needs and expertise.

Due to the long-standing and close contact to processor and hardware manufacturers, we receive hardware at an early developmental stage. In this way, we provide you with a decisive head start over the competition.

The latest technologies and findings applied correctly at an early stage: PHYTEC is your guaranteed partner for longer life cycles and greater efficiency.

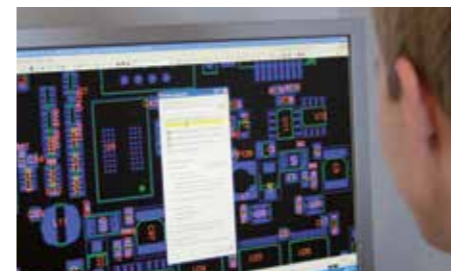

*Product Change Management and
Project Management – Change is part
of the product lifecycle.*

Successful Solutions – for a long-lasting partnership

For more than 40 years, PHYTEC products have proven themselves among the most demanding conditions. Our products are in industries including medical technology, transport and traffic, energy, avionics, building automation, drive technology, agricultural engineering and automotive. Over many years and projects, successful business relationships with well-known companies confirm our quality and attitude:

Peter Schmidlin

Member of the Executive Committee Belimo, Head of Innovation: *“When we started working with PHYTEC to implement Linux-based, form-fit embedded solutions in 2009, we were impressed with PHYTEC’s hardware and software expertise from the very beginning. PHYTEC has become a trusted partner for Belimo and we have since carried out multiple projects together.”*

Rolf Hochstrasser

Head of R&D, Thermoplan: *“The various development projects with PHYTEC were handled very professionally. The PHYTEC team is very flexible, fast, and definitely the right partner for us. The chemistry between the developers of the two companies is also important for us when working with a development partner. We have had very good experiences with PHYTEC.”*

Sven Nachtigall

Project Manager, Bender: *“PHYTEC has developed a special mapper board for us that makes it possible to upgrade the processor and our products during their life cycle. Our wish to leave the mainboard unchanged was optimally implemented. We are very pleased with the support we received from PHYTEC – from the quick feasibility check to the development of the mapper board to the support during the series launch and the software adaptation. Based on our positive experience, we plan to work with PHYTEC again for the next comprehensive upgrade.”*

together. successful.

Strong Values – for strong partnerships

With around 400 employees worldwide, its headquarters in Mainz, Germany and locations in the US, France, India and China, PHYTEC is an internationally operating supplier of series products.

Nevertheless, we have remained a family business – employee satisfaction, healthy growth and socially responsible corporate management are a few of our core values. The low employee turnover validates our efforts. We see ourselves as responsible for the success of everyone involved and provide opportunities for co-determination and personal responsibility.

The basis for this is our group of companies' solid financial strength and creditworthiness. PHYTEC has a sustained investment grade rating and is wholly owned by the founding family and management. In 2023, our group sales amounted to almost 90 million euros. Our target for 2030 is 1,000 jobs and a group turnover of ¼ billion Euros.

The fact that we were among the first to recognize the global market for "climate neutrality" and introduced our own innovations in energy management systems, wind turbines, charging stations, and many other sustainable solutions plays a key role in this. This can be especially seen with the newly built PHYTEC Technology Campus at the Mainz site, designed for maximum resource conservation, low energy consumption, and climate neutrality.

As a steadfast, crisis-proof supplier, we secure sustainable competitive advantages for our customers. That's the mission of PHYTEC.

together. reliable.
